# IDEA: función hash

Si los hashes no coinciden

Si los hashes coinciden

# Rolling Hash

## Función de Rolling Hash

$$H = c_1 \times b^{n-1} + c_2 \times b^{n-2} + \dots + c_n \times b^0$$

$$H_{\text{new}} = (b \times (H_{\text{old}} - c_{\text{old}} \times b^{n-1}) + c_{\text{new}})$$

# Finalmente:

```
6
7 ✓ long long calculateHash(const string& s, int start, int len) {
8     long long hashValue = 0;
9     power = 1;
10 ✓ for (int i = 0; i < len; i++) {
11     hashValue = (hashValue * base + (s[start + i] - 'a')) % MOD;
12 ✓     if (i != 0) {
13         power = (power * base) % MOD;
14     }
15 }
16 return hashValue;
17 }
18
19 ✓ long long roll(long long oldHash, char oldChar, char newChar) {
20     long long newHash = (oldHash - (oldChar - 'a') * power + MOD) % MOD;
21     newHash = (newHash * base + (newChar - 'a')) % MOD;
22     return (newHash + MOD) % MOD;
23 }
24 ~
